

Persona

Name: Daniel Sørensen

Age: 34

Technical Skill Level: Comfortable with everyday tech, regularly uses smart-home devices

Background

Daniel lives in a medium-sized apartment where most rooms have smart lights. He has experience with Philips Hue and IKEA smart lights. Because his workdays are busy, he appreciates tools that make life simpler. In the evenings, he often changes the lighting to help him relax. He likes apps that are simple and easy to use, without too many extra features.

Goals

He wants to adjust the lighting quickly, without needing to go through lots of menus.

He likes to set up personal moods for different activities like reading, relaxing, cooking, or gaming.

He wants to manage his home, rooms, and devices in a way that feels natural, especially when he adds something new.

He likes to keep an overview of his lighting setup so he never feels confused.

Frustrations

He gets frustrated with apps that have complicated menus, especially when simple actions are hidden behind too many screens.

He finds it annoying when it's unclear which bulb is in which room.

He dislikes it when there's no visual feedback after he changes the color or brightness

He gets annoyed by forced onboarding tutorials, especially when he just wants to make a quick change.

Motivations

Efficiency: He likes to get things done quickly.

Clarity: He wants each screen to show what he can do right away.

Personalisation: He wants the lighting to fit his daily routine and mood.

Feeling of control: He wants instant feedback. When he changes a color, the app should show the result right away.

Technology Usage Context

He usually uses the app while sitting on the sofa after work.

He often uses the app with one hand.

He wants something that fits into his calm evening routine.
